Luan Vo Trong

Software Engineer · Unity3D, SDKs & R&D · Japan · luan.votrongdev@gmail.com · github.com/luanvotrongdev

Experience

Gpro., Ltd (Japan)

Feb 2025 – Present

- **GT app:** a self-proposed prototype, built with AI-agent assistance to test the waters. It was designed around the problems of previous versions: less sophisticated, less over-engineered, visually improved, and still lightweight.
- **Gprorange:** a compact ball- and club-speed sensor using Doppler radio signals.
  - Optimizing the core Doppler algorithm for accuracy and performance.
  - Prototyping the Android application.
  - Coordinating a freelance Vietnamese team to drive development forward.

Team Leader — Coin98 (Vietnam)

Nov 2023 – Apr 2024

- **cyborg.game web game platform:** coordinated across teams to keep development smooth and delivery on time.
- **Little Me AI platform:** R&D for a stylized user-portrait platform.

R&D — Clik Joint Stock Company (Vietnam)

Nov 2021 – Sep 2022

- **Data pipeline system** (3-person team): researched and implemented an in-house tracking system with its own data pipeline on AWS.
- Built a tracking SDK so product developers could easily add tracking to the company's Virtual Tour product.

Game SDK Technical Leader — Amanotes (Vietnam)

Dec 2020 – Oct 2021

SDK technical leader on a young, fast-growing and demanding platform with a wide range of hard problems. Gave Amanotes' iOS app the ability to scale game content over the air.

- Researched, proposed, planned and oversaw a novel technology that lets mobile apps dynamically download game logic and content over the internet.
- Provided and improved the toolset and SDK that help external developers build games and content that run smoothly in the product.
- Kept the platform working smoothly for both customers and external developers.
- Identified bottlenecks in development, deployment and architecture, and proposed solutions.

Unity3D Leader — Gpronet Japan (Japan)

Sep 2017 – Dec 2020

Unity3D developer, project NTT Rainbow: the continuation of project Skyhawk, in its demonstration phase.

- **Codename Asia3:** a self-proposed prototype that rebuilt the company's legacy app as a scalable, polished game.
- Developed an in-house 3D golf simulation application in Unity.
- Ensured SDK compatibility at Unity's C++ IL2CPP layer.
- Built an in-house project-management app with Flutter.

Unity3D lead developer, project Skyhawk: part of a joint project with Fujitsu, NTT DOCOMO, MIRAIT and Sony to demonstrate 5G technology to the Japanese government. Despite many bottlenecks and problems, I made it work and showed 5G's potential in a public demonstration.

- Developed an in-house 3D golf simulation application in Unity3D.
- Solved development problems under a tight schedule and across language barriers.
- Developed the core gameplay and golf rules.
- Developed the gRPC server and the Unity client.

C++ Developer — Bstar Solution (Vietnam)

Feb 2017 – Sep 2017

- Researched and developed a C# backend module, compatible with Java and C++, for online stock and forex trading.

R&D Developer — Gameloft (Vietnam)

Sep 2016 – Feb 2017

- Researched and developed a game-casting SDK that lets users cast and play mobile games on smart TVs over Wi-Fi.
- Built a control-casting tool that lets game testers broadcast their inputs to multiple devices, shortening test time.

Game Developer — Gameloft (Vietnam)

Jun 2013 – Sep 2016

- Developed games and advertisement formats for many world-renowned brands in JavaScript and C++.
- Contributed fixes and improvements to the in-house JavaScript game engine.

Skills

- **Engines & frameworks:** Unity3D (C#, IL2CPP), Flutter
- **Languages:** C#, C++, Java, JavaScript
- **Backend & infrastructure:** gRPC, AWS data pipelines
- **Domains:** game SDKs and over-the-air content delivery, 3D golf simulation, Doppler signal processing, Android, team leadership

Education

Information Technology — University of Natural Sciences, Vietnam National University, Ho Chi Minh City
2010 – 2015 · GPA 7.2
